OpenEdge View is a secure, online reporting resource that serves as a central location for all OpenEdge merchants to process and track all types of payments. OpenEdge View offers easy access to location activity and provides transaction data from all your devices and channels.

OpenEdge View Offers a Rich Suite of Features and Functionality

Homepage: includes important product news and announcements, system updates and more

Virtual Terminal: use this online tool to process real-time credit card transactions from any device with internet access

Transaction & Batch Management Controls:

- Quickly search for a batch of transactions by date range, account range, or zoom into a specific transaction
- Easily search by batch number or date range to match specific transactions to a deposit

Reports:

- Regularly pull transaction reporting for both single and multiple location businesses
- Utilize summary and detail reports to easily track and reconcile a variety of payment types including credit, debit and check transactions
- Customize your reports with configurable fields available for both Credit and Debit transaction reporting
- Take advantage of Decline Minimizer reporting to show daily card update history
- Use your data effectively by exporting to your preferred format: PDF, Excel, CSV or HTML

Administrative Controls: Save time with the simple setup and management of users. These flexible controls allow you to structure hierarchy setup, user management, account assignment, and more
